Docket No. E-01461A-08-0430

With the current economic situation a rate increase of 8.81 % is not in the best interest of the community and could add to the already volatile housing market. Additionally, Trico unlike TEP does not market alternative resources for electricity or many of the other services that TEP has.

Bottom line on this matter is 8.81% is a large number even in a prosperous economic situation. This request should be denied and Trico should take TEP's model on marketing alternative energy options.
